ABSTRACT
Indonesia has sea boundaries with Vietnam and they are still in dispute over the Exclusive Economic Zone (EEZ) in the North Natuna Sea. Incidents between both maritime agencies along with both fishers frequently occur in the disputed area. The two governments have already talked to reach delimitation agreement. However, such efforts are never been easy. To avoid future incidents, the two countries need to negotiate and achieve provisional arrangement to jointly manage, exploit and conserve the overlapping EEZ that are rich in fish resources. This article is written to urge government to propose provisional arrangement to Vietnam. Through juridical normative methods based on the international and national rules as well as comparative practices, provisional arrangement is possible to be made. The government is urged to set detailed arrangement that can have a positive impact on fishers and the country’s economy together with the conservation of natural resources in the area concerned.

Keywords: Fisheries Joint Arrangement, The Disputed Exclusive Economic Zone, The North Natuna Sea.
A. Introduction

Indonesia is the world’s largest archipelagic country with the number of islands reaches 16,056.¹ The republic has ten (10) bordering countries.² Vietnam is one amongst them. Although not as close as Malaysia, Singapore, Timor Leste and Papua New Guinea, this socialist country has sea boundaries over the North Natuna Sea with Indonesia.³ The United Nations Convention on the Law of the Sea (UNCLOS) applies specifically with regard to the delimitation of maritime areas.

Until recently, Indonesia has not yet concluded all maritime delimitation agreement with all neighboring countries.⁴ This archipelagic nation has homework to conclude including with Vietnam. Both Indonesia and Vietnam have not agreed yet on the overlapping EEZ around the North Natuna Sea which is rich in marine resources.⁵ They have already signed the Continental Shelf delimitation agreement in 2003.⁶ However, the agreement does not automatically cover EEZ as well. The EEZ delimitation arrangement shall be further discussed and arranged between the countries.

Indonesia and Vietnam have started negotiation on disputed EEZ since 2010.⁷ In fact, the talks on delimitation agreement on the Continental Shelf took place for about 30 years until the finally reached agreement and it was signed in 2003.⁸ Incidents over disputed water frequently occur including latest incident where Vietnam Coast Guard Ship crashed into Indonesia

³ Please see Badan Pusat Statistik, loc.cit., p. 5.
⁸ Dian Septiari, loc.cit.
Naval ship to protect its national fisher’s vessel.\textsuperscript{9} It is noted that there were up to 294 Vietnam vessels illegally entering Indonesian jurisdiction within October 2014 to May 2019 or about 57 percent of foreign vessels. These vessels have been sunk down by Indonesian authorities.\textsuperscript{10}

The process of talks and negotiations is still ongoing. Finalizing delimitation agreement has never been easy for all countries including for Indonesia and Vietnam. Maritime delimitation will only be achieved if each country removes excessive nationalistic egos. Nonetheless, domestic political situation has never been friendly to each party to support the negotiation.

There is an alternative way that can be utilized by the Indonesian government before reaching the deal with Vietnam. Provisional arrangement on joint management, exploitation and conservation can be provisional solution that can have positive impact on both countries. These two ASEAN members should have respected the ASEAN Charter and the 1976 Treaty of Amity and Cooperation which encouraged the resolution of regional problems through consensus principle.\textsuperscript{11} The provisional arrangement is based on Article 74(3) of UNCLOS 1982.\textsuperscript{12} Article 74(3) sets the rule as follows:

“Pending agreement as provided for in paragraph 1, the States concerned, in a spirit of understanding and cooperation, shall make every effort to enter into provisional arrangements of a practical nature and, during this transitional period, not to jeopardize or hamper the reaching of the final agreement. Such arrangements shall be without prejudice to the final delimitation.”\textsuperscript{13}

Meanwhile, paragraph 1 of Article 74 provides the rule below:

“The delimitation of the exclusive economic zone between States with opposite or adjacent coasts shall be effected by agreement on the basis of international law, as referred to in Article 38 of the Statute of the International Court of Justice, in order to achieve an equitable solution.”\textsuperscript{14}

What is provisional arrangement? Provisional arrangement is not easily defined since there are no formal definition exists in explaining the term yet. The term provisional arrangement has similar meaning

\textsuperscript{14} Ibid.
with the term joint development zone. According to Biang, joint development zone is a joint arrangement to establish joint jurisdiction over the maritime area based on Article 74(3) UNCLOS 1982. This is a type of cooperation between one country and another to jointly manage and explore when the parties have dispute over maritime areas. The areas cover living and non-living resources including fish and hydrocarbon resources.

Article 74(3) UNCLOS 1982 provides clear rule for state parties to reach temporary agreement with neighboring countries when they cannot reach any consensus for maritime delimitation purposes. The arrangement must be made in the spirit of good faith, mutual understanding, and cooperation. Disputing countries are prohibited from endangering or hindering one another by taking dangerous actions or blocking efforts to reach final consensus.

Article 74(3) sets convenient and flexible ways for coastal states when they are not able to resolve their disputes. The article does not provide any format or standard forms. Nonetheless, form of treaty is common to use by several countries to achieve consensus including in fisheries sector.

The overlapping zone claimed by the two countries can be managed jointly for the interests of each country for the purposes of economy, welfare and environmental protection as well as science development. This provisional mechanism has been widely used in a number of bordering countries. South Korea-China, China-Japan, South Korea-Japan and Russia-Norway are amongst the countries that have used the mechanism on joint fisheries where they respectively adjacent each other.

Based on what is stated in the previous paragraphs, the problem questions arisen to study on possibility to utilize provisional or joint arrangement between Indonesia and Vietnam on the disputed EEZ consist as follows: (1) to what extent are the progress of the Indonesia and Vietnam talks over the disputed EEZ? (2) what are the experiences of other countries in resolving these disputes and utilizing provisional arrangements? (3) to what extent are Indonesian national laws or regulations regulate provisional arrangements? (4) What should be provided in the provisional arrangement between Indonesia and Vietnam? This paper is made to identify and analyze the potential of pro-

visional arrangements based on UNCLOS 1982 and Indonesian law provision on joint cooperation of fisheries in EEZ specifically for Indonesia-Vietnam purposes.

B. Research Method

This article is written based on desktop study method with juridical normative approach. The study is analytical and qualitative descriptive. The desktop/literature study method is used considering that the study of provisional arrangement on disputed EEZ can be conducted through a search of concepts, regulations, international rules and implementation through as follows: (1) primary legal material in the form of conventions, treaties and national regulations; (2) secondary material in the form of books, journals, news and official reports; and (3) tertiary material in the form of legal and language dictionaries.

C. Discussion

1. Progress Between Indonesia and Vietnam on Disputed EEZ

Indonesia has only recently concluded delimitation agreements at several coordinates with neighboring countries. There are many coordinates with ten neighboring countries to be dealt with. Indonesia has not reached any delimitation agreement with Palau and Timor Leste.19 With Indonesia’s total land and sea areas reaching 1,916,962.20 km2,20 government still struggles to strive for the remaining maritime delimitation agreement.21 Indonesia, however, must respect the reluctance of neighboring countries despite its passion for talks and negotiations.22 This is understandable considering that in many diplomatic negotiations, political interest in negotiation is more dominant rather than legal interest. However, legal arguments dominate in justifying that political interest.23

In 2019, Indonesian President Joko Widodo held a meeting with Vietnamese Prime Minister Nguyen Xuan Phuc during the 34th ASEAN Summit in Bangkok.24 The meeting was followed up by a special meeting between both foreign ministers during the ASEAN Ministerial and Dialogue Partnership Meeting in the same city.25 Interestingly, the idea of provisional arrangement emerged from the results of talks between the two ministers.26 Until re-

POSSIBILITY TO UTILIZE JOINT ARRANGEMENT ON FISHERIES BETWEEN INDONESIA AND VIETNAM ON DISPUTED EXCLUSIVE ECONOMIC ZONE (EEZ) IN THE NORTH NATUNA SEA

The overlapped EEZ in North Natuna Sea, as depicted in Figure 1, is actually rich in fishery stocks such as pelagic and demersal. Considering the rich fisheries resources in the disputed EEZ, it is impossible to push a quick deal of delimitation agreement or maintaining the country’s ego on the disputed areas just to show narrow nationalism. Compelling eagerness will harm Indonesia itself. Therefore, the international rules set out in UNCLOS 1982 must be obeyed. Provisional arrangement option based on Article 74(3) of UNCLOS 1982 is relevant and realistic ones to implement.

2. The Experiences from Other Countries

In fisheries sector, the joint arrangements of fisheries resources have already existed, for example South Korea-China, China-Japan, Korea-Japan, and Russia-Norway that are elaborated in the next section. The first three examples of joint fisheries arrangements are well-known for the dispute over the North China Sea and the Yellow Sea that has emerged for centuries. Figure 2 displays the overlapping zone amongst South Korea, China and Japan. Meanwhile, the latter example is joint fisheries arrangement made on the Bar-

Figure 1 – Overlapped EEZ between Indonesia and Vietnam

ents Sea before the signing of UNCLOS 1982 that set provisional arrangement on overlapping EEZ.\(^{30}\) countries to claim a limit of up to 200 miles encourages each country to be able to put its maximum limit.\(^{33}\) However, the over-

\textbf{a. South Korea – China}

South Korea and China are two countries bordering in the Yellow Sea.\(^{32}\) The enactment of UNCLOS 1982 which allows lapping of maritime areas happens. Both countries recognize that talks and negotiations are important to avoid further incidents and disputes. Those two-sea areas

\footnotesize

are amongst the major locations of fisheries resources. Fishers from both countries catch fishes in the region.

The two-governments do not yet conclude delimitation agreement on the overlapping zone, but they have already signed the provisional agreement in 2000 and came into effect in 2001. The talks and negotiations between China and South Korea lasted around 7 (seven) years from 1993 to 2000. In general, the agreement is about joint fishing zone. The agreement contains establishment of Provisional Measure Zone (PMZ) of intermediate fishing zone in the West Sea, South Sea and the East China Sea, measures for resource protection and conservation, refuge procedural, and the setting up of joint committee on fisheries. The agreement signed by the two countries is considered a temporary solution before reaching the final word on delimitation.

The signed agreement is believed to be the basis for preventing and overcoming illegal unreported and unregulated (IUU) fishing as well as strengthening conservation of fish stocks for food security for both countries. Before South Korea and China provisionally agreed on Provisional Measures Zone, IUU fishing was very often conducted. Fishers from either South Korea or China often illegally entered into their respective waters. This situation led to overfishing and also incidents between fishers, sometimes backed up by home country coastal guard and the neighboring coastal guard.

South Korea and China have enforced the agreement. Maritime agencies from the two countries jointly conduct patrol in the Provisional Measure Zone. Fishers from both countries are permitted to catch fish with the maximum allowable quotas, fishing period and zones. Fishers from other than the two-countries are not allowed to catch fish in that zone. In the event of a violation conducted by fisher from either China or South Korea, the neighboring country’s maritime agency has the authority to capture and then coordinate with the maritime agency of the fisher’s home country to repatriate them after the latter agency submit appropriate bond or other security. The process of law enforcement

is subject to decision of China-Korea joint fishery committee and each country’s enforcement agency can only exercise law enforcement in limited extent.43

b. China – Japan

China and Japan are two countries bordering in the East China Sea.44 Dispute amongst them started in 1950s when Japan suspended “MacArthur Line” in 1952 to encourage more fishing beyond the line.45 China was not happy to see many Japanese vessels when it also encouraged their citizen to fish along the Chinese waters.46 They realized that the dispute would be overcome. However, both countries did not have any diplomatic ties at that time after the World War II. Non-governmental organizations from both parties were used to negotiate the boundaries.47 Anyhow, the organizations did not have authority level as well as the states. Even they reached an agreement, the implementation could only be applied for themselves and would not bind the state as well its citizens. Hence, the two-government finally normalized their diplomatic ties and concluded the agreement on fisheries resources in 1975.48

The enactment of UNCLOS 1982 affected the implementation of the 1975’s agreement. Similar to South Korea-China, Japan-China also cannot exercise its 200-milesEEZ to the outer limits because their borders overlap one another.49 Both governments realized that delimitation agreements would never been easy and smooth to achieve again. This time is due to their different views on the method of maritime delimitation.50 The existence of Article 74(3) of UNCLOS 1982 was used well by China and Japan so that they could claim the overlapping areas through joint management on fisheries. The historical background of relations between the two countries, especially related to World War II, often colors the process of negotiations and the implementation of the provisional agreement.51

Japan and China signed provisional agreement to jointly managed overlapping EEZ in the East China Sea on 1997 and replacing the agreement signed in 1975.52 The agreement entered into force in 2000, known as Sino-Japanese Agreement, has

43 Ibid., p. 462.

52 Clive H. Schofield, loc.cit.
five-year term with the condition that the agreement still applies after the expiry date of the first five-year term or afterwards. The party may terminate at any time after the expiry date by giving the other party six month’s written notification.\textsuperscript{53}

The main provisions in this Sino-Japanese agreement are conservation and utilization of marine living resources and governing normal operation order at sea.\textsuperscript{54} They both agreed to utilize scientific method to conserve any marine living resources in the East China Sea. In addition to main focus of provisions, the agreement also set the rules of traditional fishery activity, fish catch permit, nationality, fishing vessels or boats, fees, allowable catch and the zone for fish capture.\textsuperscript{55} Similar to South Korea-China provisional agreement, the Sino-Japanese agreement establishes Fisheries Joint Committee (FJC) consisting of four members (two from China and two from Japan).\textsuperscript{56}

In terms of enforcing the agreement and relevant laws of each country, the agreement allows the maritime authority of each country to arrest other nationals' fishers.\textsuperscript{57} Either China or Japan must promptly inform through appropriate channel about actions and punishment that will be taken on the fishers. Fishing boats or vessels and their crews shall be released and repatriated as soon as bond or other security guarantee has been posted.\textsuperscript{58}

The Sino-Japanese agreement, anyhow, is not applicable to nationals other than the two-countries according to Vienna Convention on the Law of Treaties.\textsuperscript{59} It means that other foreign vessels and nationalities may enter provisional measure zone or conduct fishing in that area. This includes South Korea fishers. Nonetheless, relevant laws in each Japan and China territory shall be obeyed by foreign vessels.

c. South Korea-Japan

Different to South Korea-China provisional agreement and Sino-Japanese agreement that each consisted of one overlapped EEZ, South Korea and Japan had overlapped maritime boundaries at least in the East Sea (Korea)/the Sea of Japan (Japan) and the East China Sea.\textsuperscript{60} South Korea and Japan had already provisional arrangement establishing joint development zone since 1974.\textsuperscript{61} The arrangement set the rules on joint managing

\textsuperscript{61} Clive H. Schofield, \textit{loc.cit.}, p. 12.
on natural resources that was more focus on hydrocarbon in the continental shelf in the East China Sea. The agreement also mentioned about fishing but not as a major rule.

In terms of fisheries cooperation, South Korea and Japan signed an agreement nine years before the 1974-agreement (in1965). However, Japan abrogated unilaterally the agreement in 1998. It is needed for the two countries to re-arrange fisheries cooperation based on the rule in UNCLOS and to focus more on the area around Tok-Do/Takeshima near the East Sea/Sea of Japan. They realized that they still adhere to their respective methods in determining maritime delimitation. It did not take long for the two countries to enter into a new provisional agreement.

In January 2000, South Korea and Japan concluded provisional arrangement on joint fisheries management. The South Korea-Japan agreement covers two disputed maritime areas on fishing consisting the East Sea/Sea of Japan and the South of Jeju Island. The two countries set interim maritime zone on the two disputed areas. The agreement set the rules of controlling Illegal, Unreported and Unregulated (IUU) fishing, establishing Joint Fishing Committee, temporary outer limit of EEZ, fishing in restricted zone and relevant domestic applicable in the zone.

d. Russia - Norway

Another fisheries cooperation that is important to be looked into and studied about is the fisheries cooperation in Europe. One very good collaboration is between Russia Federation and Norway. The two countries entered into two different agreements concerning activities in the Barents Sea. The first bilateral agreement between the two countries was signed on 11 April 1975 regarding cooperation in the fisheries sector. The second one was signed on 15 October 1976. The latter concerns about mutual fisheries relations. In contrast to fisheries cooperation in East Asia which was originally due

64 Ibid. See also Sun Pyo Kim, Maritime Delimitation and Interim Arrangement (Leiden: Koninklijke Bril NV, 2004), p. 252.  
68 Korea Maritime Foundation, loc.cit.  
70 Geir Honneland (1), loc.cit., p. 252. Please see Andreas Ostagen, Managing Conflict at Sea: the Case of Norway and Russia in the Svalbard Zone, Artic Review on Law and Politics, 2018, 9: pp 100-123, p. 106-107. See also Geir
to overlapping EEZ and Continental Shelf in their regional oceans, the cooperation between the Russian Federation and Norway is solely for fisheries matter and it is independent from the issue of maritime delimitation. Nevertheless, the EEZ dispute between the two countries does exist but was not brought into the agreement. 71

Honneland states that the Barents Sea covers parts of the Nordic Ocean that is lying between North Cape on the Norwegian mainland, South Cape on the Spitsbergen Island of the Svalbard Archipelago, and the Russian archipelagos of Novaya Zemlya and Franz Josef Land. 72 The Barents Seamap is depicted in Figure 3. The Sea is rich with fisheries resources such as cod, haddock, capelin, redfish, blue whiting, Greenland halibut and other species. 73 These stocks are the target of fishers and surrounding countries for food and economic security. Norway and Russia are heavily dependent on these stocks. However, both countries also concern about the protection and conservation of living stock against overfishing.

A distribution quota of 50:50 for cod was agreed to be allocated each for Russia and Norway. 75 Total Allowable Catch (TAC)

![Figure 3 – Maps of Barents Sea](source: Geir Honneland (2000).)

---

71 Division of Ocean Affairs and the Law of the Sea Office of Legal Affairs, *loc. cit.*, p. 84.
72 Geir Honneland (2), *loc. cit.*
is also limited based on a precautionary approach. Overfishing happened in the early 1990s, by Russian vessels, has encouraged Norway to ask Russia to jointly maintain and conserve the Barents Sea properly. The two-countries then formed the Permanent Russian-Norwegian Committee for Management and Enforcement Co-operations (Permanent Committee) on the Fisheries Sector in 1993. The overfishing was still the issue between Russian and Norway in mid-2000s.

Cooperation between Russia and Norway somehow is recognized as successful cooperation. However, differences of opinion, tensions and conflicts mark the implementation of this collaboration. Overfishing and arrestment of Russian vessels in 1998 are amongst the causes. Nonetheless, the formation of Permanent Committee to support marine living resources by suggesting Total Allowable Catch (TAC) has helped the stock conservation in the Barents Sea. It is no wonder that Norway and Russia are amongst the countries that have good fishery resource governance based on the survey on 28 countries conducted by Ocean Prosperity Roadmap project. These 28-states surveyed represent governance of 80% of the world total catch. Russia and Norway have prominent index on the aspect of research, management, enforcement and socioeconomics on fisheries sector as seen in Figure 4.

The dynamics of relations and cooperation between the two countries which has lasted for almost four decades through provisional agreement finally reached its longtime goal. Russia and Norway signed maritime delimitation agreement and cooperation in the Barents Sea and Arctic Ocean in 2010. This delimitation covers EEZ and also continental shelf. The

---

76 Geir Honneland (4), loc.cit. Precautionary approach is known as the precautionary principle. It was first appeared in 1980s through the Convention on the Conservation of Antarctic Marine Living Resources 1980 and the UNCLOS 1982. The principle encourages state parties to protect the environment irrespective of lack of scientific evidence. Please see Mary George, Legal Regime of the Straits of Malacca and Singapore (Singapore: Lexis Nexis, 2008), p.173.

77 Geir Honneland (1), loc.cit, p. 259.

78 Geir Honneland (4), loc.cit., p. 95.

79 Geir Honneland (2), loc.cit. p.2.

82 Ibid., p. 11.

83 Ibid., p. 13.

treaty does not only regulate cooperation in the fisheries sector but also cooperation in the hydrocarbon sector within the framework of maritime delimitation. The 2010-agreement has implications on the certainty of outer limits of EEZ and Continental Shelf for Russia and Norway as well as just leaving last unresolved maritime boundary between Norway and Denmark near Norwegian Svalbard Archipelago and Greenland.

The provisional arrangement on EEZ is based on Law No. 5/1983 on the Exclusive Economic Zone (EEZ Law 1983) which surprisingly was enacted a year after signatory of UNCLOS 1982 but before the convention was ratified. However, EEZ Law 1983 is in line with the EEZ provisions in UNCLOS 1982.

Article 3(2) of Law No. 5/1983 provide the basis for the government to negotiate provisional arrangement with the condition that maritime delimitation agreement has not been reached. The Article sets whenever no maritime delimitation on EEZ has been made, the principle of equidistance through the median line will be applied,

Figure 4 – Marine and Fisheries Governance Index

3. National Regulation relating to Provisional Arrangement

Indonesia has agreed, signed and ratified UNCLOS 1982. The convention was ratified in 1985 through Law No. 17/1985.
except provisional agreement has been made with neighboring countries. The rule emphasizes in implementing equidistance principle without prejudice to government plan to arrange provisional measures on disputed areas.

One and only provisional agreement signed was between Indonesia and Australia. The two-countries bilaterally signed an agreement in 1989 (Timor Gap Treaty or TGT). The agreement established provisional zone, depicted in Figure 5, and joint cooperation for development of seabed resources in the Timor Gap including shares in managing the zone.\textsuperscript{87} It also formed a Ministerial Council and a Joint Authority from both countries (bicameral system).\textsuperscript{88} The agreement temporarily ended dispute of two countries for 17 (seventeen) years.\textsuperscript{89} In fact, agreement framework on the Timor Gap was being a model for other states and considered as the most prominent of joint development zone of cooperation.\textsuperscript{90} Since East Timor has been independent from Indonesia, the agreement was automatically ended. The Timor Gap is currently under the authority of the new nation Timor Leste. No provisional arrangement has been made by

Indonesia and neighboring countries after the 1989-agreement.

ed by Law No. 45/2009 (Fisheries Law 2004) and Law No. 32/2014 on Maritime (Maritime Law 2014). The Fisheries Law 2004 allows arrangement of fisheries cooperation as well as agreement with foreign countries.\textsuperscript{92} The Maritime Law 2014 set the rules of jurisdictional sovereignty based on applicable regulations and international law.\textsuperscript{93}

4. Important Elements that should be Provided in Provisional Arrangement Between Indonesia and Vietnam

Reflecting on the experiences of other countries in the previous sections, there are lessons that can be applied by the Indonesian government if it desires to continue negotiating provisional arrangement with Vietnam concerning disputed EEZ at the North Natuna Sea. The legal framework for provisional arrangement is surely a treaty. In general, the treaty or agreement consists of: (1) the zone to be jointly managed; (2) joint authority and its tasks as well as its number of members; (3) cooperation in the respective sector (in this case fisheries) such as joint cooperation on marine conservation and governance, fishing quota, fish capture permit, fishing vessels, capture zone, total allowable catch, fishing gear, fees and levies, and rules for other foreign vessels entering the zone; (4) security and law enforcement; (5) applicable law at the zone; and (6) financing. At a minimum, government of both counties shall adopt these elements. The government can also modify them or add other necessary elements adjusting with the national interest.

In detail, the six elements of provisional agreement that can be suggested are as follows:

1. The zone. The government should identify and define the zone (or even name it) and its coordinate points to be managed. Option of zoning division (such as Timor Gap Treaty) or open access (such as Russia-Norway) can be discussed and talked by Indonesia and Vietnam. One option made has consequences to subsequent clauses such as applicable law as well as security and law enforcement;

2. Joint Authority. Most of provisional arrangement on joint cooperation establishes joint authority or committee. The structure and formation of joint authority are left to the wishes of the state parties, either in a bicameral form (such as Indonesia-Australia), single joint authority (most of provisional arrangement), or single state management. In the implementation, state parties can agree with each other to establish an additional committee if it is deemed necessary, for example Russia-Norway. For Indonesia itself, the government should identify which agency is appropriate as well as au-

\textsuperscript{92} Article 29 (2) Fisheries Law 2004.
\textsuperscript{93} Article 7(4) Maritime Law 2014.
thorized to lead the council or joint authority and identify other agencies that have tasks on fisheries, security, maritime and border matters to support the lead agency.

3. Cooperation in the respective sector (in this case fisheries). Cooperation mechanism in East China Sea and Yellow Sea region as well as in the Barents Sea focus on joint cooperation on marine conservation and governance, fishing quota, fish capture permit, fishing vessels, capture zone, total allowable catch,\(^{94}\) fishing gear, fees and levies, and rules for other foreign vessels entering the zone (Sino-Japanese agreement is absence for this). Indonesian Fisheries Law 2004 along with its subsidiary regulations has also set the rules on those matters above.

4. Security and law enforcement. Both Indonesia and Vietnam must agree about their own jurisdiction in the zone. This is important not to confuse respective agency or coastal guard in enforcing the agreement and their national law at the zone. The authority or jurisdiction of respective maritime/coastal guard depends on the option the two governments choose, either zoning division or open access. Nevertheless, both countries can agree to initiate joint patrol in the whole zone.

5. Similar to the element of security and law enforcement, applicable law can also depend on the option state parties choose. If zoning division is chosen, Indonesian law can only be applied in, let say, Indonesia zone and vice versa for Vietnam. If open access is chosen, Indonesia and Vietnam can enforce respective applicable laws on the two countries national vessel and their crews. The implementation of applicable law depends on which marine or coastal guard enforce it first on the vessel and its crew.

6. Financing. Both countries must allocate budget and financing for implementing agreement and exercising their authority at the zone. Third-party funding or financing is possible to be raised as long as both countries have mutual consent on it.

Arrangement clauses that will be developed by Indonesia and Vietnam must focus on the protection and conservation of natural resources without compromising the economic interests of both countries. The UNCLOS 1982 sets quite a lot of rules on the marine environment and living resources. Every coastal state in utilizing EEZ must, among others: (1) protect and preserve the marine environment; (2) prevent, reduce and control sea pollution; and (3) control of marine pollution caused

\(^{94}\) The term "total allowable catch" does not exist in UNCLOS 1982. However, the regulatory system in this convention allows the application of the TAC concept, which was first introduced through the UNCLOS session in 1975. See Charles Quince, The Exclusive Economic Zone (Delaware: Vernon Press, 2019), p. 39.
by technology or the entry of new foreign species into the marine environment.\textsuperscript{95} Both Indonesia and Vietnam must set up a monitoring and evaluation system for environmental control and recovery.

D. Closing

The idea of provisional arrangement proposed by the government as a temporary solution to achieve maritime delimitation on EEZ with Vietnam should be appreciated and supported. Instead, provisional arrangements must also be proposed to other neighboring countries when maritime delimitation agreement is hard to achieve. It is never been easy to conclude such delimitation arrangement.

Experiences from South Korea, China and Japan show how difficult they are even in negotiating provisional arrangement. So is Russia and Norway. Nevertheless, their experiences shall be our lesson to learn. Except China, their successful implementation has made them as prominent countries in marine and fisheries governance.\textsuperscript{96}

The examples of frameworks of agreements and institutions in the above-mentioned countries can be adopted for the government in talking and discussing with Vietnam in the context of fisheries. Last, important elements of a bilateral treaty or provisional arrangement as discussed earlier, surely, can be an input for the government for further study as well as making a plan and strategy for negotiating with Vietnam.

CURRICULUM VITAE OF AUTHORS

Muhammad Faiz Aziz
Muhammad Faiz Aziz, born in Bogor, 20 March 1981. Aziz obtained his Bachelor of Laws degree in 2003 from the Faculty of Law, University of Indonesia. In 2016, Aziz earned a Master of Law from The National University of Malaysia. The author is a lecturer at the Indonesia Jentera School of Law with the area of interest including maritime law, private international law, business law and technology as well as law of border area. He is also a researcher at the Indonesian Center for Law & Policy Studies (PSHK). The author is also active in assisting the formulation and design of legal policies. Publications have been made by him including in maritime sectors. The author can be contacted via: muhammad.aziz@jentera.ac.id.

Khamid Istakhori
Khamid Istakhori, born in Temanggung, 12 February 1975. He is currently studying at Indonesia Jentera School of Law with the concentration of private and business law and continually to learn a new subject of legal practice including in maritime legal field. Khamid is the recipient of the Munir Said Thalib scholarship program, a scholarship program specifically for social activists. As a prominent activist, he is the Secretary General of the Federation of SERBUK Indonesia (FSERBUK), a national labor organization declared to be the Pioneer Federation on the Struggle for Occupational Safety and Health (OSH) for worker. The author can be reached via: khamid.istakhori@jentera.ac.id.

Anak Agung Made Desni Sensini
Anak Agung Made Desni Sensini, born in Denpasar, 09 December 1998. Desni is law student at the Indonesia Jentera School of Law with areas of interest including business law and taxation and continually to learn a new subject of legal practice including maritime and technology. Desni also has bright achievements such as the 3rd Winner of Lomba Karya Tulis Ilmiah (LKTI) Sciencesational held by Faculty of Law University of Indonesia, Top 10 Article Writing Competition Danny Darussalam Tax Centre (DDTC) and Best 20 abstract of LKTI Faculty of Economics and Business Universitas Sebelas Maret (UNS). The author can be contacted via: agung.desni@jentera.ac.id

Yogi Prastia
Yogi Prastia, born in Palembang, 20 February 1998. Yogi is law student at Indonesia Jentera School of Law. He has some achievements while studying in Jentera, such as the 3rd winner of LKTI Sciencesational held by Faculty of Law University of Indonesia, best presentation in the competition LKTI (Kertas) University of Hasanuddin Makassar, the 3rd Winner of LKTI corruption free of economy faculty of Business University of Gadjah Mada, the 2nd winner of debate competition Jentera Law Fair and debate semifinalist in competition at Padjdjaran Law Fair XI. The author can be contacted via: yogi.prastia@jentera.ac.id
